

When is a Concussion a *Complex Concussion*?

In up to as many as 20% of cases, individuals present with a more complex scenario experiencing persistent symptoms that fall outside of the realm of what is considered typical. Some of the symptoms that could indicate further treatment is required include:

- ❏ Dizziness, balance issues and nausea
- ❏ Difficulty sleeping
- ❏ Difficulty concentrating
- ❏ Headache and light sensitivity
- ❏ Organizational issues
- ❏ Memory issues
- ❏ Blurred vision
- ❏ Emotional changes
- ❏ Irritability
- ❏ Apathy

ReMed's Comprehensive Assessment and Treatment programs will determine what will best help the individual advance goals and make progress.

Concussion, mild, moderate and severe brain injury

Most individuals who have sustained a **Concussion or Mild Traumatic Brain Injury** are able to return to work within a couple of weeks, without any complications or issues. **Complex Concussions** are troubling for the individual and may present challenges for their family members, employers and others. **ReMed's** focused approach can significantly reduce recovery time and improve outcomes.

ReMed's Outpatient, Home and Community Services provide comprehensive assessment and targeted treatment by a team experienced in addressing the range of impairments related to complex concussions, meeting the individual where the need is. Our goal is to return an individual to as full of an activity and performance level as possible—quickly and safely.
